

Welcome to Code Club!

Welcome back to Code Club!!!

**Eat Snack
then come
back!**

Stargazer Mission

Our Payload Box has arrived!!!!

Raspberry Pi Sensor Hat – Has Arrived!!!!

Thermometer, Pressure Sensor (Barometer), GPS, 434Khz Radio Transmitter

Raspberry Pi Camera Module – on the way!

Balloon & Parachute - on the way!

Configure the Raspberry Pi & Hat.

Make an antenna for the Radio Transmitter

Mount our camera on the Payload box

Decorate the box! And pick a mascot!

Weigh the Balloon/parachute/payload

Test the parachute!!!!

Test our tracking/telemetry

Apply for launch permission!

This Week

**Virtual Tour of the School
Using cameras & Unity**

360 Cameras

Making a Simple 360 Viewer in Unity

Everything you see in a Unity game is from a *Camera* which works just like a camera in real life – i.e. you're looking through the viewfinder/on the screen

We want to take a 360 picture, which is spherical, and look around it

To do that, you have to imagine you're inside a ball with the picture painted on the inside of the ball

Objects, Textures, Materials & Shaders

Objects - things with shapes in the 3d space.

Spheres, cubes, cones, tanks, spaceships, doors, walls, houses etc

Textures – Patterns or pictures we want to used in our environment

Materials – coverings we put onto Objects
– using Textures

Shaders – tells the computer how to draw the material onto the object

Unity – lets make some crates/carpets

Making a Simple 360 Viewer in Unity

1) Make a Sphere

Easy peasy – GameObject -> 3D Object -> Sphere

2) Put our picture on the inside of the sphere

Photo -> Texture -> Material

3) Position our camera **inside** the sphere, so we're looking at the picture on the inside

Put the sphere at 0,0,0 and then put the camera at 0,0,0 too

Making a Simple 360 Viewer in Unity

For Speed, we don't usually draw (or *Render*) the inside of objects (you'll see this in some games - Clipping)

But our camera is
INSIDE the sphere!

We need to flip it so it renders on
the inside rather than the outside

This is called - flipping the 'normals'

A 'normal' is the direction the face of an object is pointing

We do this with a special "*Shader*" which tells the PC what to draw

Unity – Putting it all together

Today's Activity

- Go and photograph the school!

OR

- Stay here and we'll build a simple 3rd person "level" in Unity

OR

- Pick a Scratch or Python activity from the Project pages

Today's Activity

Open up a new browser **TAB**, and go to:

Airyhall School

Welcome to Code Club!

January 11, 2018
Edit

Welcome to the Airyhall School Code Club Website!

The first code club meeting will take place on the 15th January 2018. In this first session we'll look at Scratch, and the Rock Band activity – you can find the sheet for this activity here:

<https://codeclubprojects.org/en-GB/scratch/rock-band/>
